## *Invitation to demo day*

Our HydroScout is the solution for full-coverage data of the water bed. It is also suitable for smaller and shallow waters, making it perfect for regional water management.

USV Louise

## *Details & information*

## *Demo day Monday 1 June: discover the added value in the field*

Curious how USV Louise maps water beds in your region? In a practical session, we will show how the HydroScout with multibeam works.

We will demonstrate in the field:

• How the HydroScout works

• Measuring in shallow water (0.75 – 5.0 metres)

• The results of the measurements

We will discuss:

• The technical specifications and developments

• External influences on measuring

• The considerations for deploying USV Louise

We are proud that Tijhuis Ingenieurs is the first in the Netherlands to deploy this advanced measuring system.
